MOTION GRAPHICS WITH GOOGLE FLOW & GEMINI

The Complete Adaptation & Prompt Playbook

A complete technical conversion of Charlie Hills' 15 Motion Graphics Skills & 16 Effects re-engineered specifically for Google Gemini (Director) & Google Flow (Generative Video Studio).

15 Full Skills Adapted | **16 Motion Effects** | **Zero-Claude Required**

Authoritative Guide for Creators, Marketers, Founders & Motion Designers

1. Deep Analysis: Claude Code vs. Google Flow

The original repository (`charlie947/motion-graphics-skills`) by Charlie Hills revolutionized AI-assisted motion graphics. However, its original implementation was hard-coded for **Claude Code on Opus 5.5**, executing code-rendered animations through local headless Chrome and HyperFrames.

Many creators and production teams exclusively operate in the **Google AI Ecosystem** using **Google Gemini** and **Google Flow**. This guide performs a deep-dive architectural translation, providing drop-in prompts and workflows to produce identical launch-grade motion graphics entirely using Google's suite.

The Architectural Shift

Dimension	Original Claude Code Model	Google Flow & Gemini Architecture
Primary Role	Deterministic Code Generator (HTML5, Canvas, Three.js).	**Gemini as Executive Director & Architect; Google Flow as Visual Synthesis Engine.**
Rendering Engine	Headless Chromium via `window.seek(seconds)` frame export.	**Google Flow Multi-Shot Timeline (Veo 2 diffusion model + Imagen consistency).**
Asset Consistency	Inline SVG vector math & embedded base64 fonts.	**Google Flow "Ingredients" (Style References, Brand Color Swatches, Vector Overlays).**
Motion Physics	Programmatic CSS/JS spring physics & bezier curves.	**Diffusion Motion Prompting (Dolly push-in, kinetic acceleration, locked baselines).**
Audit Mechanism	Automated pixel checks at 0s, 2s, 4s, 8s timestamps.	**Keyframe ingredient inspection & Gemini multi-modal frame critique.**
Local Code Option	Requires Node.js, Claude CLI, HyperFrames.	**Gemini can write pure standalone HTML5/Canvas/Three.js if code is preferred.**

The 7 Inviolate House Rules (Adapted for Google Flow)

1. **Facts First (Zero Hallucination):** Every metric, date, follower count, or product feature must originate from verified user input. Never permit Google Flow to invent arbitrary statistics.
2. **Brand Identity via Ingredients:** Feed your hex codes (#HEX), typography rules, and logo PNG/SVGs into Google Flow's reference asset slots before launching any generation.
3. **The Banned Default Filter:** Enforce negative prompts against: amateur typewriter text outside input boxes, purple-to-blue generic neon gradients, bouncy carnival overshoot, and detached low-res stock icons.
4. **Pacing & The 8-Second Loop Rule:** The core loop consists of 4 distinct phases: **0.0-2.2s** (The Morph/Action), **2.2-6.6s** (The Active Hold with micro-motion), **6.6-8.0s** (Eased return to initial state).
5. **The 3-Second Scroll-Stop Rule:** The opening frame must contain high visual contrast, immediate physical depth, and the core hook. If the opening 3 seconds fail to arrest thumb scroll, rebuild them.
6. **Mobile Safe-Zone Protection:** For 9:16 vertical exports (Instagram Reels/TikTok), all text and brand marks must remain strictly between **y: 360px** and **y: 1420px**, with a 120px clear margin on the right edge.
7. **One Object Changing Shape:** High-end motion design is an existing object transforming into another (button into player, card into editor, bars into line). Avoid simple cross-fades between unrelated assets.

2. Setup: Brand Intake for Google Flow

In Claude Code, `brand-intake` builds `brand.md` and `MOTION.md`. In Google Flow, this is replaced by the **Google Flow Brand Token & Reference Asset Kit**. Gemini interviews you to establish your visual system, which you lock into Google Flow as custom reference ingredients.

The Gemini Brand Intake Interview Prompt

Paste this prompt into **Google Gemini** (Gemini Advanced, Gemini 1.5/2.0 Pro, or Google AI Studio):

PROMPT: Gemini Brand Intake & Motion System Generator

```
You are the Executive Motion Graphics Director for Google Flow. You are setting up my master brand motion
design system. Conduct a 2-batch interview to extract my visual DNA. Do not output preamble.

Ask Batch 1 immediately and wait for my response:
1. Brand Name and one-sentence purpose.
2. Target Audience (one sentence on who watches).
3. Primary Offer / Promotion with real URL.
4. Target Emotional Frequency (pick up to 3: calm, premium, playful, urgent, technical, warm, bold).

After I answer, ask Batch 2:
5. Brand Hex Codes (Background, Surface, Ink, Accent 1, Accent 2), typography names, and logo files.
6. 3 to 5 motion reference descriptions or links.
7. The #1 thing my motion must NEVER do.

Once answered, compile the final MOTION_FLOW.md design system and generate the master Google Flow Style
Reference Prompt.
```

The Output: `MOTION_FLOW.md` System Prompt

Gemini will return a structured configuration. Save this to paste into your Google Gemini sessions or Google Flow project description:

HOUSE RULE: MOTION_FLOW.md Master Tokens

```
# BRAND MOTION SYSTEM (Google Flow Reference)
- Ground (Background): #0B0B0F (Deep Obsidian)
- Surface (Cards/Glass): #16181F (Frosted Glass with 1px #38BDF820 border)
- Ink (Primary Typography): #F8FAFC (Crisp White, tight tracking)
- Muted (Labels/Grid): #64748B (Cool Slate)
- Accent 1 (Active Focus): #2563EB (Electric Blue)
- Accent 2 (Highlight/Callout): #38BDF8 (Cyan Pulse)
- Motion Physics: Spring-based, cubic-bezier(0.16, 1, 0.3, 1), 24fps motion-on-twos feel.
- Negative List: No typewriter text, no rainbow gradients, no bounce, no fake numbers.
```

Google Flow Ingredient Setup Protocol

WORKFLOW TIP: How to configure Google Flow Ingredients

1. In Google Flow, open **Project Assets / Ingredients**.
2. Upload your high-resolution transparent logo PNG/SVG as **Asset 1 (Brand Mark)**.
3. Upload 1-3 visual reference stills representing your desired lighting and materials (e.g. frosted glass, dark UI, studio illumination) into **Style References**.
4. Set the default aspect ratio: **16:9 (1920x1080)** for Web/YouTube, **4:5 (1080x1350)** for LinkedIn, or **9:16 (1080x1920)** for Reels.

3. Planning & Storyboarding Skills

Skill 02: Motion Brief Writer

Turns a rough marketing thought into an airtight, production-ready multi-shot brief.

PROMPT: Gemini Motion Brief Writer Prompt

```
You are a Motion Design Brief Writer for Google Flow. I will give you a rough idea, target metric, or
announcement.

Your job:
1. Ask for any missing essentials in ONE batch (Exact words/numbers, target platform/aspect ratio, duration in
seconds, brand hex codes).
2. Never invent numbers. If I have no data, mark it "Illustrative Demo".
3. Return:
   - Part 1: A 3-sentence executive summary.
   - Part 2: A 4-phase beat sheet (Start, Change, Hold with micro-motion, Seamless Return).
   - Part 3: The exact Google Flow scene prompts for each beat, ready to paste into the timeline.
```

Skill 03: Reference-to-Motion

Deconstructs any reference video or webpage into Google Flow camera directives and style tokens.

PROMPT: Gemini Reference Deconstruction Prompt

```
Analyze this attached motion graphic reference (video or screenshot) and deconstruct it into two distinct
layers for Google Flow:

1. MOVES LAYER (The kinematic choreography):
   - Camera behavior: Dolly speed, focal length, angle of incidence.
   - Pacing: Shot duration, transition physics, hold duration.
   - Hero Transformation: What physical object changes into what?

2. LOOK LAYER (The aesthetic tokens):
   - Lighting model: Key light, rim light, ambient occlusion, reflection intensity.
   - Materials: Matte finish, frosted acrylic, liquid glass, metallic luster.
   - Color grading: Dominant hex tones and contrast curve.

Output: A standalone Google Flow scene prompt applying these EXACT moves and look to my topic: [INSERT TOPIC],
with my text: [INSERT COPY]. Exclude all reference logos, original characters, and proprietary branding.
```

Skill 04: Motion Prompt Writer (The 8-Part Google Flow Framework)

Charlie Hills' 8-part framework is the gold standard for motion briefs. Here is the translated architecture optimized for Google Flow's generative engine:

HOUSE RULE: The 8-Part Google Flow Motion Architecture

1. **The Bar:** Benchmark standard (e.g. "Apple Keynote fidelity. Tactile, physical, micro-detailed").
2. **Format:** Exact resolution (1080x1350 / 1920x1080 / 1080x1920), 24fps/30fps, 8-second seamless loop.
3. **The One Rule:** One hero object occupies 60-70% of frame volume; executes ONE satisfying structural metamorphosis.
4. **Look:** Volumetric lighting, frosted glass depth, 1px specular rim, exact brand hex tokens, bold typography.
5. **Motion:** Smooth deceleration, spring settling, continuous subtle ambient life during hold, zero linear movement.
6. **Negative Constraints:** No stock emoji, no generic 3D human hands, no purple neon blur, no text clipping.
7. **Self-Audit Check:** Pause frame at second 4.4; ensure headline value is 100% legible at 240px mobile thumbnail size.
8. **The Scene:** 2-3 precise visual sentences directing the camera, subject morph, and return cycle.

4. Launch & Product Video Skills

Skill 05: Launch Video (SaaS / Cohort Launch)

Generates a premium 30-45 second product launch video across a 7-beat narrative timeline in Google Flow.

PROMPT: Google Flow 7-Beat Launch Master Prompt

```
Project: 45-Second SaaS / Product Launch Film
Aspect Ratio: 16:9 (1920x1080) or 4:5 (1080x1350)
Style: Ultra-premium product commercial. Liquid glass UI panels, soft volumetric studio lighting, deep obsidian
background #0B0B0F, electric blue accent #2563EB.

Generate a multi-shot sequence across these 7 chronological beats:

- Shot 1 (0-4s) - The Hook:
  Camera: Slow cinematic push-in. High-contrast typography: "[HEADLINE BEAT 1]" in crisp white #F8FAFC. Deep
matte background with subtle floating ambient light particles.

- Shot 2 (4-9s) - The Validation Beat:
  Camera: Slight orbital pan. Floating frosted glass cards showcasing real customer metrics: "[METRIC 1]" and
"[METRIC 2]". Crisp 1px specular edges.

- Shot 3 (9-17s) - The Hero Engine in Action:
  Camera: Isometric tilt down. An elegant UI input box. A sleek cursor types "[TYPED PROMPT]" in real-time. A
glowing cyan ripple triggers instantaneous UI synthesis.

- Shot 4 (17-22s) - The Quality Check:
  Camera: Macro focus. Three status badges cascade: "Checked", "Verified", "100% Brand Aligned" with glowing
green checkmarks #10B981.

- Shot 5 (22-32s) - The Architecture:
  Camera: Smooth pedestal crane down. Three-tier isometric workflow diagram connecting [FEATURE A] -> [FEATURE
B] -> [FEATURE C] via glowing conduits.

- Shot 6 (32-38s) - The Breakthrough Metric:
  Camera: Direct frontal locked-off. A huge numerical metric "[KEY METRIC]" counts up smoothly from 0 with
spring deceleration.

- Shot 7 (38-45s) - The Call to Action:
  Camera: Slow zoom out. Product title "[PRODUCT NAME]" with official brand mark, followed by explicit CTA:
"[CTA TEXT]" and URL "[URL]". Holds for 4 seconds.
```

Skill 06: Apple-Grade Keynote Launch Film

Emulates Cupertino’s product reveal aesthetics: liquid glass, dark-mode macOS widgets, dynamic islands, and physical depth.

PROMPT: Google Flow Apple Keynote Aesthetic Prompt

```
Cinematic product showcase film in the style of an Apple Keynote hardware/software reveal.
Aspect Ratio: 16:9 (1920x1080). 60fps aesthetic.

Environment: Pristine Cupertino design studio lighting. Infinite gradient ground #F5F5F7 (Light) or #0F0F12
(Dark Mode). Soft, highly diffused contact shadows.
Materials: Precision-milled aluminum chassis, ultra-pure liquid frosted glass, physical 1px specular light
reflections along curved squircle borders.

Camera & Choreography:
Slow, deliberate macro dolly glide sweeping along the top edge of a floating macOS-style window. A minimal dark
menu bar with 5 items rests at top.
In the center, a dark translucent tile titled "[HERO FEATURE]" smoothly expands outward into an interactive
canvas. Accent color #0A84FF glows with soft optical bloom.
No sudden cuts. Every transition is governed by Apple-grade spring physics with gentle, physical inertia.
Negative: No cartoonish 3D, no jitter, no low-resolution UI textures, no generic drop shadows.
```

5. Explainer & Data Motion Skills

Skill 07: Vox-Style Documentary Explainer

Inspired by Vox Borders and Johnny Harris: halftone textures, torn paper collage, newsprint layering, and motion-on-twos.

PROMPT: Google Flow Vox Documentary Explainer Prompt

```
Style: High-end journalistic motion graphic explainer (Vox / Johnny Harris aesthetic).
Aspect Ratio: 16:9 or 1080x1350. Frame rate: 24fps motion-on-twos (handmade stop-motion feel).
Palette: Newsprint Cream #F1E6D0, Deep Navy #14213D, Editorial Red #B8312A, Halftone Ink #1E1E1E, Warm Paper
#FBF7EE.

Scene Choreography (30-60 Seconds):
- Shot 1 (The Hook): A large editorial question stamps onto the screen: "[THE CORE QUESTION]". Textured paper
background with subtle dust, scratches, and grain overlay.
- Shot 2 (The Turn): Fast paper-tear transition revealing archival documents and historical headlines. Hand-
drawn red marker circles highlight key dates: "[DATE / SOURCE]".
- Shot 3 (The Metaphor): Macro zoom out. Multi-layered collage of newspaper clippings, halftone dot patterns,
and vintage satellite imagery assembling in rapid stop-motion steps.
- Shot 4 (The Synthesis): Dynamic isometric map with animated red route lines pulsing across topological
terrain. A bold stat card lands with physical paper slap: "[FACT WITH SOURCE]".
- Shot 5 (The Resolution): Crisp typographic outro summarizing the conclusion. Source citations clearly visible
in bottom margin.

Negative: No digital vector gradients, no modern slick corporate 3D, no AI morph artifacts, no shiny plastic.
```

Skill 08: Animated Data Chart (Fidelity Preserved)

Creates an 8-second looping chart where data integrity is strictly maintained.

PROMPT: Google Flow Animated Chart Prompt

```
A high-precision animated data visualization for financial / tech reporting.
Aspect Ratio: 4:5 (1080x1350) for LinkedIn or 16:9. Seamless 8-Second Loop.
Colors: Obsidian Ground #0F172A, Metric Bars #38BDF8, Trend Line #F59E0B, Typography #F8FAFC.

Motion Timeline:
- 0.0s - 2.0s: Six vertical metric bars representing [LABELS: M, T, W, T, F, S] stand tall with values
[VALUES]. Simultaneously, the bars slim down into slender geometric pillars while a luminous spline curve
traces smoothly across their summits.
- 2.0s - 6.5s (Active Hold): The final Saturday value [VALUE] receives a highlighted badge. A glowing pulse
wave travels along the trend line once every 2 seconds. Faint gridlines remain rock steady.
- 6.5s - 8.0s (Return): The trend line gently dissolves as the bars thicken back into their starting
proportions. Frame 8.0s is identical to Frame 0.0s.

Mandatory: All numerical values must remain 100% accurate as provided. Display "[Illustrative Data]" tag top
right if sample numbers are used.
```

Skill 09: Milestone Reveal (Celestial Particle Convergence)

Celebrates subscriber, customer, or revenue milestones with a luxury celestial aesthetic rather than cheap party confetti.

PROMPT: Google Flow Milestone Particle Reveal Prompt

```
Ultra-premium milestone celebration video. Tone: Luxury brand reveal, dark cosmic elegance.
Aspect Ratio: 1080x1350 (LinkedIn) or 1080x1920 (Reel). 12-Second Seamless Loop.
Background: Midnight Navy #050814. Accent: Radiant Gold #EAB308 or Electric Cyan #38BDF8.

Visual Progression:
- 0-2s: A deep night sky with 3,500 tiny glowing starlight particles drifting with subtle celestial turbulence.
- 2-6.5s: A gravitational pull initiates. Thousands of light particles accelerate toward center frame in a
majestic cosmic vortex, assembling into crisp, solid digits: "[EXACT NUMBER]".
- 6.5-7.5s: A razor-thin metallic accent line draws smoothly left-to-right beneath the number.
- 7.5-8.5s: The category label "[LABEL e.g. ACTIVE SUBSCRIBERS]" fades in below the line with elegant upward
motion.
- 8.5-10.5s (Hold): The number gently shimmers with internal optical refraction.
- 10.5-12s (Reset): Particles disperse back into the celestial void. Frame 12 matches Frame 0 exactly.

Negative: No carnival confetti, no balloons, no cartoon fireworks, no bouncy easing.
```

6. Opener, Comparison & Promotion Skills

Skill 10: 3D Cinematic Title Sequence

Scroll-stopping 10-15 second opener featuring 3D camera travel through atmospheric environments.

PROMPT: Google Flow 3D Cinematic Opener Prompt

```
Cinematic 3D title sequence. Moody atmospheric mystery.
Aspect Ratio: 16:9 (1920x1080) or 9:16 (1080x1920). Duration: 12 seconds.

Scene Setting: A rain-slicked Tokyo or New York street at 3:00 AM. Deep reflections across wet asphalt puddles, soft cinematic fog, gentle falling rain streaks.
Camera Movement: Slow, steady camera dolly pushing forward low to the ground, gliding past towering low-poly architectural facades.
Lighting: Luminous neon signs and billboard screens glow softly through the mist with anamorphic lens flares.
Branded signage: "[BRAND NAME / LOGO]".
Climax: The camera slows as it approaches an illuminated glass pavilion displaying the core question: "[THE HOOK QUESTION]" in massive architectural typography.
Audio Bed: Low sub-bass ambient drone, distant rain, rising sonic swell on the title reveal.
```

Skill 11: Model Showdown (Multi-AI Comparison)

Formats side-by-side or stacked comparative evaluations of AI models.

PROMPT: Google Flow Model Showdown Prompt

```
Triple-split screen comparative evaluation graphic.
Aspect Ratio: 9:16 (1080x1920). Duration: 12 seconds.
Background: #0B0B0F. Three equal horizontal panels stacked vertically (each 1080x360).

Layout & Visuals:
- Top Header (Safe Zone): Bold hook "Same Prompt, 3 AIs: [TEST PROMPT]".
- Panel 1 (y: 540): Labeled "Gemini 2.0 Flash" in dark rounded badge with cyan dot. Shows output video A.
- Panel 2 (y: 900): Labeled "Opus 5.5" in dark rounded badge with coral dot. Shows output video B.
- Panel 3 (y: 1260): Labeled "GPT-4o" in dark rounded badge with green dot. Shows output video C.
- Outro: A glowing trophy badge highlights the winner with metric verdict: "[WINNING MODEL]: +34% Faster & More Coherent".
```

Skill 12: Newsletter Promo (15-Second Teaser)

PROMPT: Google Flow Newsletter Promo Prompt

```
High-conversion 15-second promo video for a newsletter edition or publication.
Aspect Ratio: 1080x1350.
- 0-3s (Hook): Large typography "[PROVOCATIVE HOOK QUESTION]". High contrast, urgent visual impact.
- 3-11s (Proof): Three rapid 2.5-second vignettes showing real screenshots and findings from the newsletter: [PROOF 1], [PROOF 2], [PROOF 3] with slow push-in.
- 11-15s (End Card): Clean brand card: "[NEWSLETTER NAME]" with subtitle "Read free at [URL]".
```

Skill 13: Looping Cover GIF (Cinemagraph Engine)

PROMPT: **Google Flow Looping Cover Prompt**

```
Static editorial cover with single isolated kinetic element (Cinemagraph).
Resolution: 896x640 or 1080x1080. Seamless 9-Second Loop (20fps).
Base Artwork: The provided still cover image: [ATTACHED COVER].
Choreography: Camera is 100% LOCKED (Zero panning, zero zoom). Only ONE named element moves: "[SPECIFIC ELEMENT
e.g. The glowing beam of the lighthouse / The pulsating orange circuit line]".
The motion follows a perfect sinusoidal cycle, fading back into the initial pose. Frame 180 matches Frame 0
pixel-for-pixel.
```

Skill 14: Reel Export & Safe-Zone Mastering

HOUSE RULE: **Social Reel Export Standard (1080x1920)**

When formatting for Instagram Reels, YouTube Shorts, and TikTok:

- Keep all typography, faces, and brand logos between **y: 360px and y: 1420px**.
- Keep all critical visuals **120px away from the right edge** (where like, comment, and share buttons overlay).
- **FFmpeg Command for Pristine Social Upload (No Color Washout):**

```
ffmpeg -y -i input.mp4 -vf "scale=1080:1920:force_original_aspect_ratio=decrease,pad=1080:1920:(ow-iw)/2:(oh-
ih)/2:color=0x0B0B0F,format=yuv420p" -c:v libx264 -profile:v high -crf 18 -pix_fmt yuv420p -color_range tv -
colorspace bt709 -color_primaries bt709 -color_trc bt709 -c:a aac -b:a 128k -movflags +faststart
social_reel.mp4
```

7. The 16 Master Motion Effects (Google Flow Prompts)

Every single one of Charlie Hills' 16 motion effects translated into standalone Google Flow / Veo video generation prompts. Each prompt runs on an **8-second seamless loop** (**0-2.2s Move, 2.2-6.6s Active Hold, 6.6-8.0s Return**).

Category A: Interfaces (Product in Action)

PROMPT: 01. Button -> Video Player

```
Style: Ultra-sleek software UI motion. Aspect Ratio: 1080x1080 or 16:9. 8-Second Seamless Loop.
Background: Deep matte graphite #0E1117. Brand Accent: #2563EB.
- 0.0s - 2.2s: A compact rounded pill button labelled "[BUTTON TEXT]" with a small play icon stretches
dynamically into an expansive 16:9 frosted-glass video player titled "[VIDEO TITLE]". A faint dashed ghost
remains at the button's origin. The play icon travels smoothly to center and morphs into a pause icon.
- 2.2s - 6.6s (Hold): The video player displays a cinematic preview thumbnail. The bottom progress bar creeps
forward smoothly while a digital timestamp counts from 0:12 to 0:28.
- 6.6s - 8.0s (Return): The player gracefully collapses back into the compact pill button. Frame 8.0s matches
Frame 0.0s.
```

PROMPT: 02. Search -> Results

```
Style: Modern search experience motion. Aspect Ratio: 1080x1080 or 4:5. 8-Second Loop.
- 0.0s - 1.2s: A minimal search pill expands to full width. A blinking cursor rapidly types "[SEARCH QUERY]"
character by character.
- 1.2s - 2.2s: Three distinct result cards rise sequentially from beneath the search bar, staggered by 0.15s:
[RESULT 1 with Metric], [RESULT 2 with Metric], and [RESULT 3 with Metric].
- 2.2s - 6.6s (Hold): Results glow with a subtle hover state on the first card.
- 6.6s - 8.0s (Return): Cards slide downward and vanish; search query clears back to initial placeholder state.
```

PROMPT: 03. Card -> Workspace

```
Style: Feature expansion motion graphic. Aspect Ratio: 16:9 or 1080x1350. 8-Second Loop.
- 0.0s - 2.2s: A compact card titled "[CARD TITLE]" located in the bottom-left corner expands diagonally into a
full desktop editor window titled "[WORKSPACE NAME]". Subtle perspective guidelines trace the expansion. The
window populates with a left sidebar, editor canvas, and status chips ("Draft", "Synced").
- 2.2s - 6.6s (Hold): Subtle cursor movement selects a line of code or text.
- 6.6s - 8.0s (Return): Window folds back into the origin card.
```

PROMPT: 04. Tabs -> Panels

```
Style: Interactive tab switcher. Aspect Ratio: 1080x1080. 8-Second Loop.
- 0.0s - 2.0s: Three segmented tabs: "[TAB 1]", "[TAB 2]", and "[TAB 3]". The active dark pill indicator
stretches elastically from Tab 1 to Tab 2. As it arrives, the data table below smoothly shifts its rows,
sliding 16px horizontally and replacing [TAB 1 DATA] with [TAB 2 DATA].
- 2.0s - 6.6s (Hold): Subtle shimmer on the active tab indicator.
- 6.6s - 8.0s (Return): The pill slides back to Tab 1 as data rows return to origin state.
```

Category B: Data & Metrics (Making Points Land)

PROMPT: 05. Chart Morph (Bars to Line)

```
Style: Premium data transformation. Aspect Ratio: 4:5 or 1080x1080. 8-Second Loop.
- 0.0s - 2.2s: A sleek 6-column bar chart titled "[CHART TITLE]" displaying values [VALUES: V1 to V6]. In a fluid staggered wave, the bars slim down into vertical hairlines while a vibrant glowing line traces across their peaks. A soft gradient fill blooms underneath the line.
- 2.2s - 6.6s (Hold): The peak value receives a callout badge: "[KEY VALUE]". A luminous pulse travels along the curve.
- 6.6s - 8.0s (Return): The line dissolves as bars expand back to their original widths.
```

PROMPT: 06. Dashboard Zoom (Targeted KPI)

```
Style: Executive analytics highlight. Aspect Ratio: 1080x1350. 8-Second Loop.
- 0.0s - 2.0s: A multi-tile business dashboard. Four corner brackets in electric cyan snap around the "[KPI NAME]" card. The ambient dashboard dims by 60% while the targeted KPI card scales forward smoothly into hero position, displaying "[REAL FIGURE]", "[DELTA e.g. +24%]", and a sparkline.
- 2.0s - 6.6s (Hold): Sparkline animates with continuous micro-pulse.
- 6.6s - 8.0s (Return): Hero card recedes back into its dashboard slot; ambient brightness restores.
```

PROMPT: 07. Spring Stack (Physics Cards Fan-Out)

```
Style: Tactile physical motion design. Aspect Ratio: 1080x1080. 8-Second Loop.
- 0.0s - 2.2s: A tight stack of three product/testimonial cards: [CARD 1], [CARD 2], [CARD 3]. The top card leads a fanning motion, swinging outward with high-velocity spring physics, overshooting its resting angle, and settling with a damped wobble. The underlying cards fan out at staggered angles.
- 2.2s - 6.6s (Hold): Cards float with subtle organic hovering.
- 6.6s - 8.0s (Return): Cards snap back into a pristine single deck.
```

PROMPT: 08. Magnetic Dock (Proximity Icon Swell)

```
Style: macOS-inspired dynamic dock. Aspect Ratio: 16:9 or 1080x1080. 8-Second Loop.
- 0.0s - 2.2s: A translucent glass dock containing 7 app icons: [TOOL ICONS]. An invisible magnetic cursor sweeps from left to center. As the cursor approaches, icons swell in a smooth mathematical bell curve. The center icon expands to 180% size, displaying a crisp label "[TOOL NAME]" overhead.
- 2.2s - 6.6s (Hold): The cursor sweeps gently across neighboring icons, swelling each in turn.
- 6.6s - 8.0s (Return): Cursor exits to right; dock returns to uniform resting state.
```

Category C: Typography (Making Words Move)

PROMPT: 09. Masked Kinetic Typography

```
Style: Editorial kinetic typography. Aspect Ratio: 16:9 or 1080x1350. 8-Second Loop.
- 0.0s - 2.0s: The word "[HERO WORD]" appears as an ultra-fine wireframe outline. A vibrant liquid gradient
artwork rises through the letters from bottom to top, guided by a razor-thin accent horizon line. Underneath, a
second line "[SUBTITLE LINE]" slides into view through an invisible horizontal mask.
- 2.0s - 6.6s (Hold): The artwork inside the letters pulses with subtle optical refraction.
- 6.6s - 8.0s (Return): Fill recedes downward; subtitle drops back beneath mask.
```

PROMPT: 10. Elastic Typography (Baseline Locked)

```
Style: Kinetic variable font choreography. Aspect Ratio: 1080x1080. 8-Second Loop.
- 0.0s - 2.2s: The word "[TITLE WORD]" rests on an illuminated baseline. While the baseline remains strictly
stationary, the letters stretch upward and narrow in width, peaking at the middle letter. The middle letter
transforms into vibrant accent color #38BDF8 with an overhead dimension readout: "wdth 62%".
- 2.2s - 6.6s (Hold): Subtle micro-stretch breathing.
- 6.6s - 8.0s (Return): Typography relaxes elastically back to standard proportion.
```

PROMPT: 11. Text -> Layout (Editorial Reflow)

```
Style: Magazine layout metamorphosis. Aspect Ratio: 4:5 or 16:9. 8-Second Loop.
- 0.0s - 2.2s: A single compact headline "[HEADLINE]" splits into two phrases. Each phrase travels along
animated guideline paths to its designated position in a multi-column editorial grid. A kicker tag, body text
blocks, an image frame, and a pull-quote card ("[PULL QUOTE]") assemble in strict reading order.
- 2.2s - 6.6s (Hold): Editorial layout rests with subtle lighting sweep across the image.
- 6.6s - 8.0s (Return): Grid collapses back into the initial single-line headline.
```

PROMPT: 12. Image Reveal (Sequential Shutter Slats)

```
Style: High-fashion product teaser. Aspect Ratio: 1080x1080 or 9:16. 8-Second Loop.
- 0.0s - 2.0s: The screen is covered by 7 dark vertical architectural slats with subtle 1px metallic edges.
Beginning from left to right, each slat collapses inward toward its own vertical centerline in rapid
succession, revealing the hero product image: [PRODUCT IMAGE] with a badge "[BADGE TEXT]".
- 2.0s - 6.6s (Hold): Hero image illuminated by slow cinematic key light sweep.
- 6.6s - 8.0s (Return): Slats close sequentially, re-concealing the image.
```

Category D: Systems (Explaining Connectivity)

PROMPT: 13. Perspective Shift (3D Layer Deconstruction)

```
Style: Technical architecture exploded view. Aspect Ratio: 16:9. 8-Second Loop.
- 0.0s - 2.2s: A flat multi-layered application interface consisting of: Base Database Layer, Logic/API Layer,
and UI Interface Layer. The camera tilts to a dynamic 3/4 isometric perspective as the three layers pull apart
along the Z-axis toward a common vanishing point, revealing inter-layer connection guides.
- 2.2s - 6.6s (Hold): The exploded stack breathes gently with subtle organic camera float.
- 6.6s - 8.0s (Return): Layers compress back together into a single flat interface.
```

PROMPT: 14. Glass Focus (Optical Lens Inspection)

```
Style: Precision optical document inspection. Aspect Ratio: 1080x1350. 8-Second Loop.
- 0.0s - 2.0s: A detailed pricing or audit table containing 5 blurred rows: [ROWS 1-5]. A physical, double-rimmed magnifying glass lens slides smoothly downward, stopping directly over "[THE ROW THAT MATTERS]". Only the content inside the lens is razor sharp, magnified by 1.15x with realistic chromatic aberration along the glass perimeter.
- 2.0s - 6.6s (Hold): Lens rests on key row with subtle glass glare sweep.
- 6.6s - 8.0s (Return): Lens glides back to top row; background blurs uniformly.
```

PROMPT: 15. Flowing Paths (Energy Connector Pulses)

```
Style: System data flow animation. Aspect Ratio: 16:9 or 1080x1080. 8-Second Loop.
- 0.0s - 2.2s: Five interconnected rounded nodes on dark ground: Source Node "[SOURCE]" on left; Three Distribution Channels "[CH1]", "[CH2]", "[CH3]" in center; Output Node "[OUTPUT]" on right. Luminous pulses of electric cyan travel along smooth bezier conduits. As each pulse reaches a node, the node responds with an expanding shockwave ring.
- 2.2s - 6.6s (Hold): A continuous second wave of pulses circulates through the network.
- 6.6s - 8.0s (Return): Pulses dissipate; connectors fade back to resting ambient glow.
```

PROMPT: 16. Particle Logo Assembly

```
Style: Signature brand reveal. Aspect Ratio: 1080x1080 or 16:9. 8-Second Loop.
- 0.0s - 2.2s: Thousands of fine geometric dust particles scatter across the canvas. Drawn by a magnetic vortex, they trace elegant curved trajectories with luminous micro-trails, converging to assemble the crisp, solid shape of [BRAND LOGO FILE]. Typography "[BRAND NAME]" and "[TAGLINE]" resolves cleanly beneath.
- 2.2s - 6.6s (Hold): Assembled mark gleams with subtle internal reflection.
- 6.6s - 8.0s (Return): Particles disperse outward on identical trajectories back to origin.
```

8. Polish, Auditing & Local Code Engine

The Apple Motion Audit Prompt for Gemini

When your video or animation feels unpolished but you cannot pinpoint why, paste this audit prompt into Gemini alongside your video or screenshot frames:

PROMPT: Gemini Apple Design Motion Audit

```
You are a Principal Motion Design Director auditing this motion graphic against Apple's Human Interface
Guidelines and premium motion design standards.

Audit this sequence across five core dimensions:
1. Spatial Hierarchy: Is there exactly ONE dominant focal point, or are elements competing?
2. Kinematic Physics: Do transitions use natural deceleration and spring settling, or do they feel mechanical
and linear?
3. Visual Restraint: Are there banned clichés (amateur glow, rainbow gradients, cheesy typewriter text, bounce
overshoot)?
4. Type Legibility: Can every word and numerical metric be comfortably read at 240px mobile thumbnail size?
5. Hold Vitality: Does the hold state (seconds 2.2 - 6.6) maintain subtle organic life, or does it freeze into
a dead still?

Provide a ranked list of specific, actionable fixes, worst issue first. For each issue, provide the exact
replacement prompt string to paste into Google Flow.
```

The “Fix One Thing” Refinement Protocol

HOUSE RULE: The Golden Rule of AI Motion Iteration

When fine-tuning an AI-generated motion graphic, **never ask for three changes at once**. Changing multiple variables simultaneously destabilizes the diffusion model’s consistency. Name **one thing only**:

```
The current scene is 90% there. Fix ONE thing only:
[SPECIFIC PROBLEM: e.g. The headline typography in Shot 2 extends past the card boundary at second 3.5].
Keep the camera trajectory, lighting model, color palette, and timing exactly as they currently are. Confirm
what you modified.
```

The Universal Master Negative Prompt String for Google Flow

Paste this master negative prompt into Google Flow’s negative prompt field to ban low-grade visual artifacts:

PROMPT: Master Negative Prompt for Google Flow

```
Negative Prompt: amateur motion graphics, cheap typewriter text animation, cartoon bounce, exaggerated rubbery
overshoot, rainbow gradient text, purple to blue generic neon soup, low-resolution UI cards, blurry text,
invented numbers, fake metrics, stock photo people, disembodied 3D hands, cluttered screen, clipping
boundaries, harsh jarring camera cuts, jitter, flickering artifacts, distorted typography, generic clip art.
```

Bonus: Gemini Local Code Engine (Zero-Claude HTML/Canvas Output)

If you prefer 100% deterministic, pixel-exact procedural code that you can run in your local browser and export without any AI video subscription, Google Gemini can write the entire HTML5/Canvas/Three.js code directly:

PROMPT: Gemini Local Code Engine Prompt

```
Act as a Senior Creative Technologist. Write a single, completely self-contained HTML file called 'motion.html'
implementing the following motion graphic: [INSERT EFFECT / LAUNCH FILM].

Requirements:
1. Pure HTML5, Vanilla JavaScript, and Canvas or Three.js (via pinned unpkg CDN).
2. Zero external CSS frameworks or local dependencies. Embed all styling inline.
3. Deterministic Clock: Implement 'window.seek(seconds)' so any frame can be rendered from time alone.
4. Seamless 8-second loop (0-2.2s move, 2.2-6.6s hold with micro-motion, 6.6-8.0s return).
5. Brand colors: Ground #0B0B0F, Surface #16181F, Accent #2563EB, Ink #F8FAFC.
6. Auto-detect '?render' in URL to disable requestAnimationFrame and await manual window.seek() calls for
headless MP4 export.
```

GOOGLE FLOW & GEMINI MOTION GRAPHICS PLAYBOOK – End of Master Guide
Derived from charlie947/motion-graphics-skills. Adapted for universal production use.
